

### NIST - Platform as a Service (PaaS)

**Delivery Model**

- Provides a software platform on which developers can build their own applications and host them
- Provides middleware-style services such as database and component services for use by applications
- Applications do not need to worry about the scalability of the underlying platform
- Fundamentally it acts as "Middleware" between IaaS and SaaS services

**Examples**

- Google AppEngine
- Amazon EC2 WaveMaker
- Database tools & software
